Teyvi

START WITH WHAT MATTERS

Your AI. Your space.

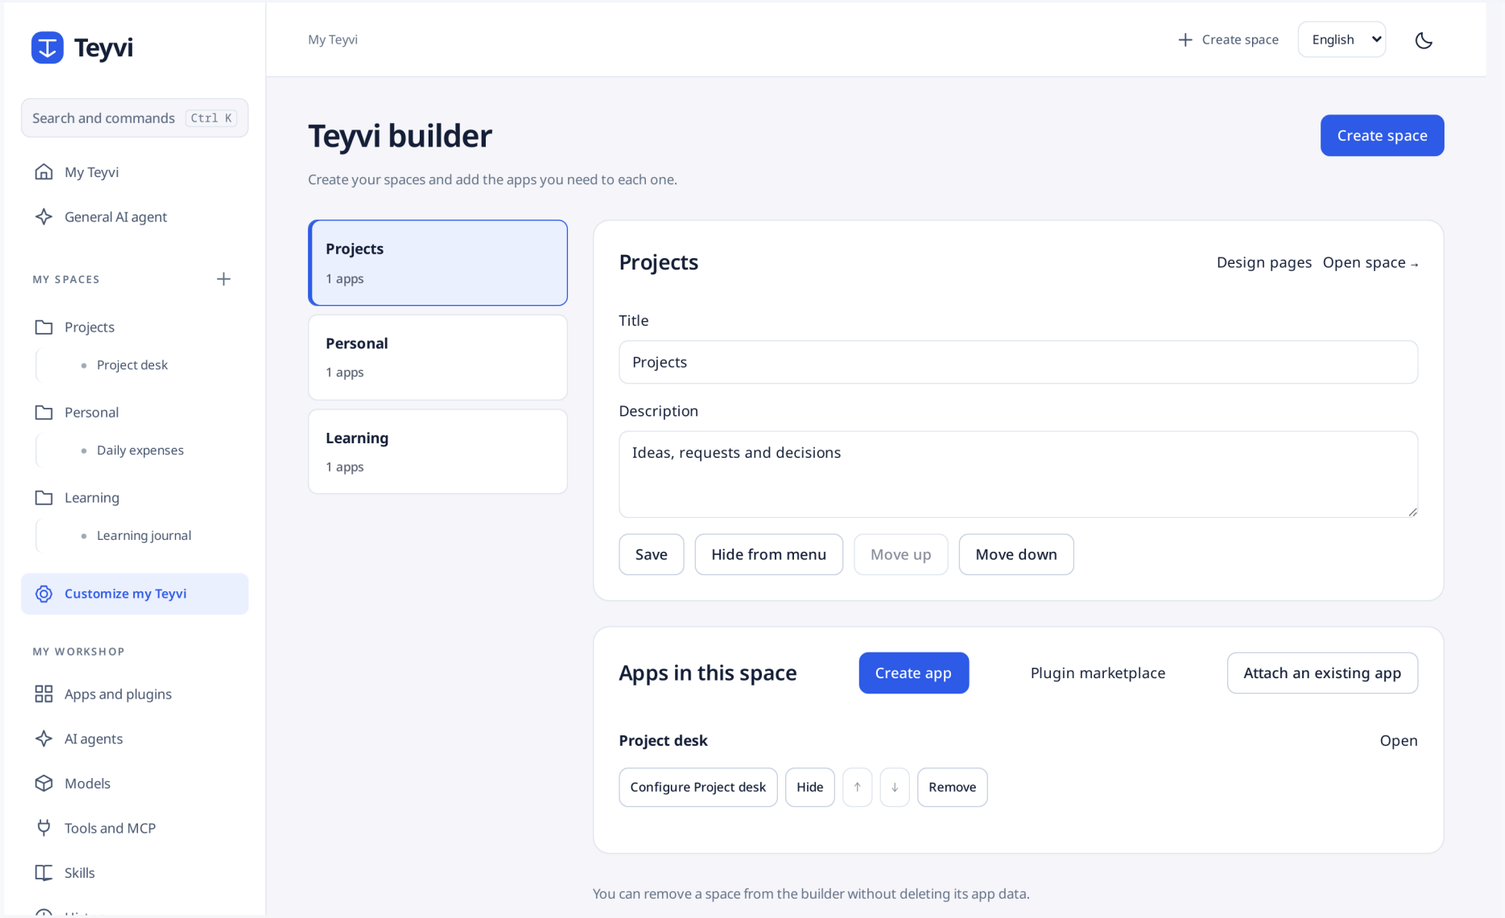

Build a useful workspace around one task — then make it your own.

YOUR ENVIRONMENT

A structure that belongs to you.

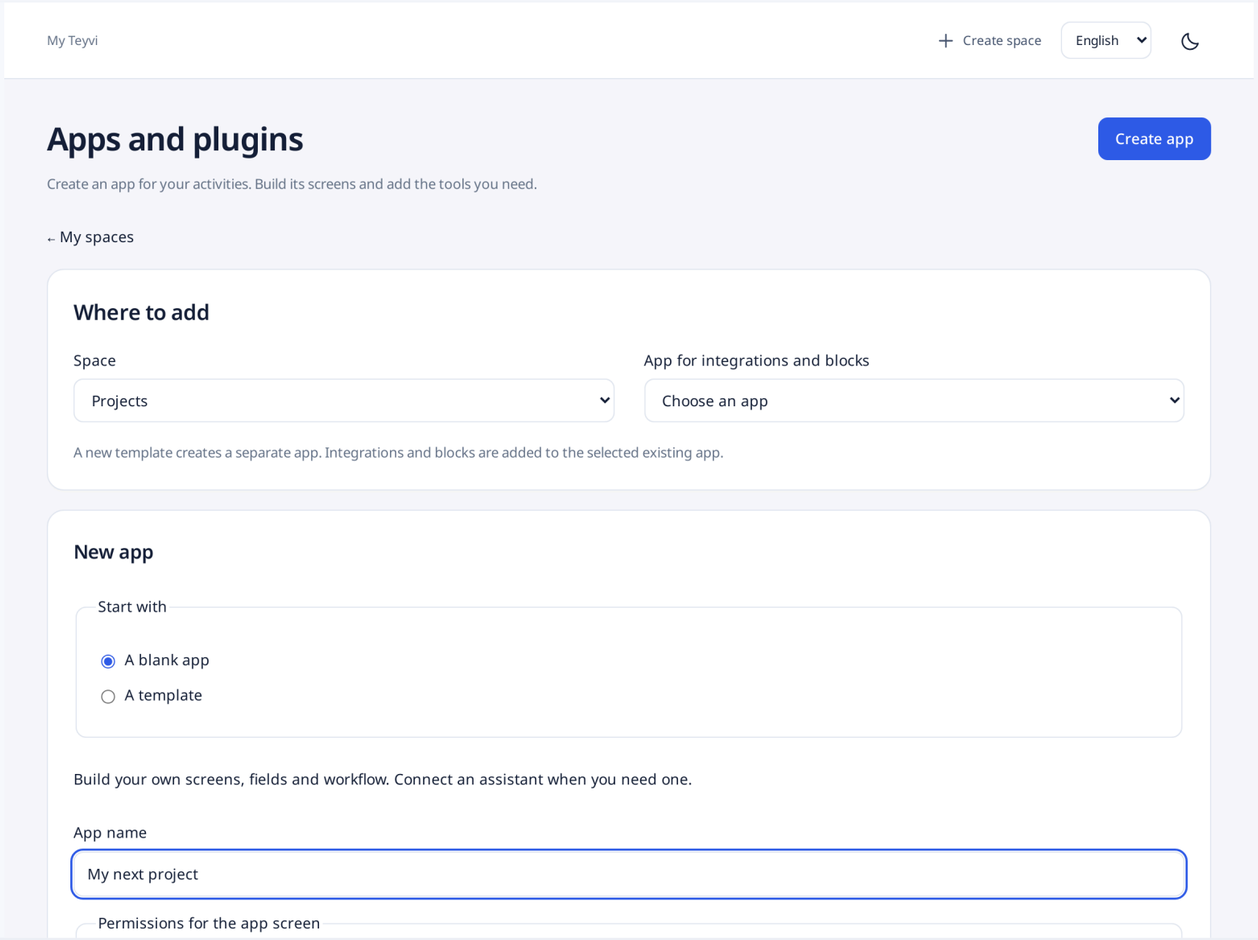

Create spaces for projects, personal plans and learning. Choose the apps inside each one.

START SMALL

An empty space. A clear first step.

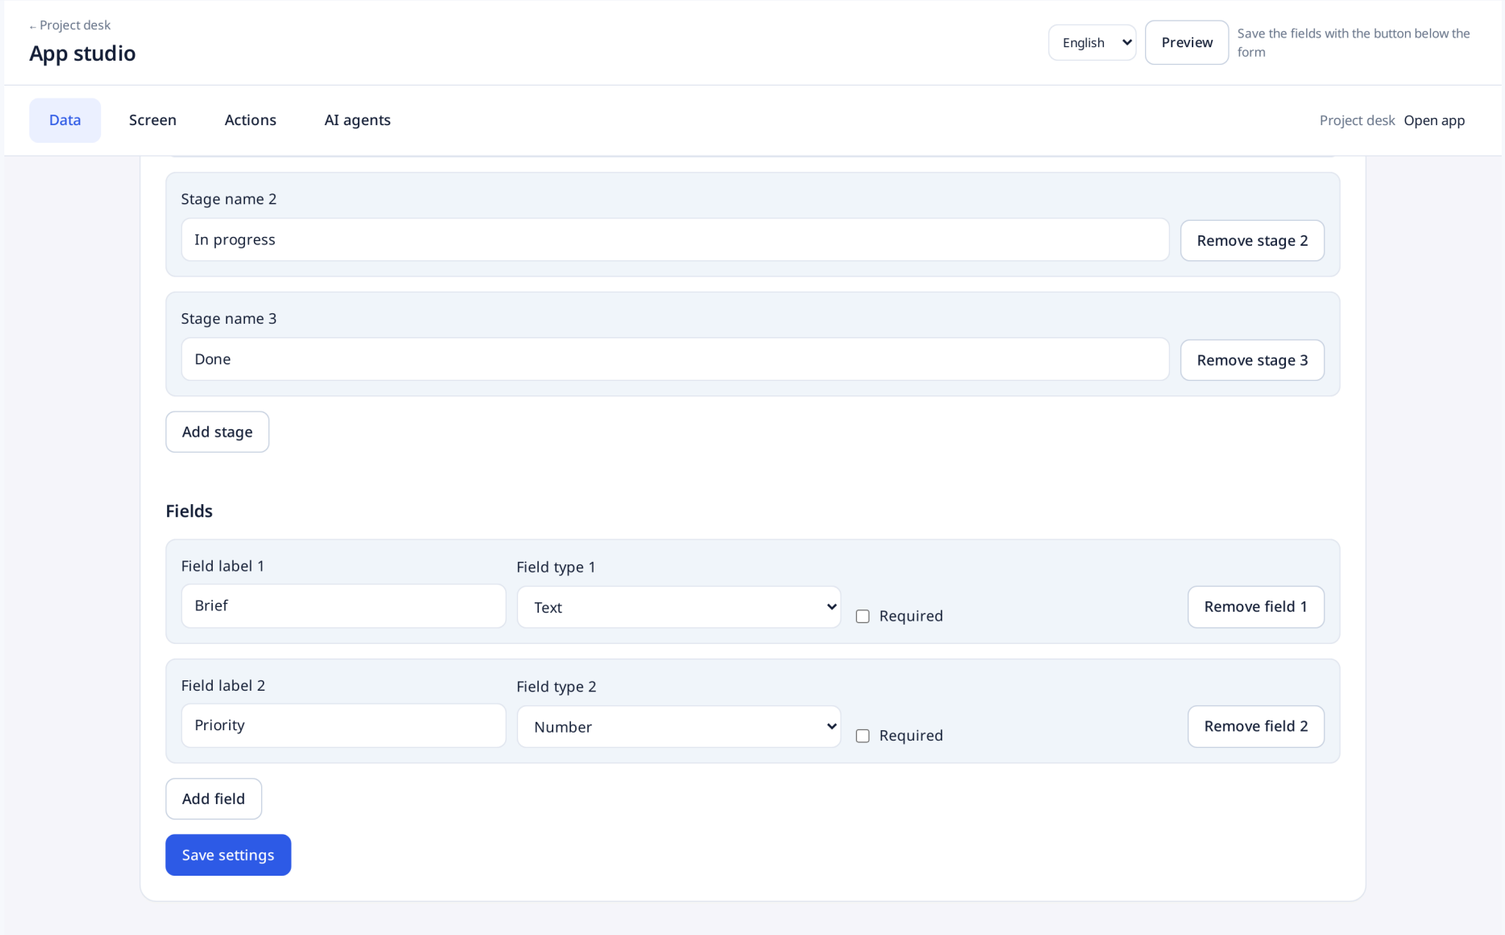

Name an app, start from scratch or choose a template. Add only what you need.

YOUR DATA

Define the information you work with.

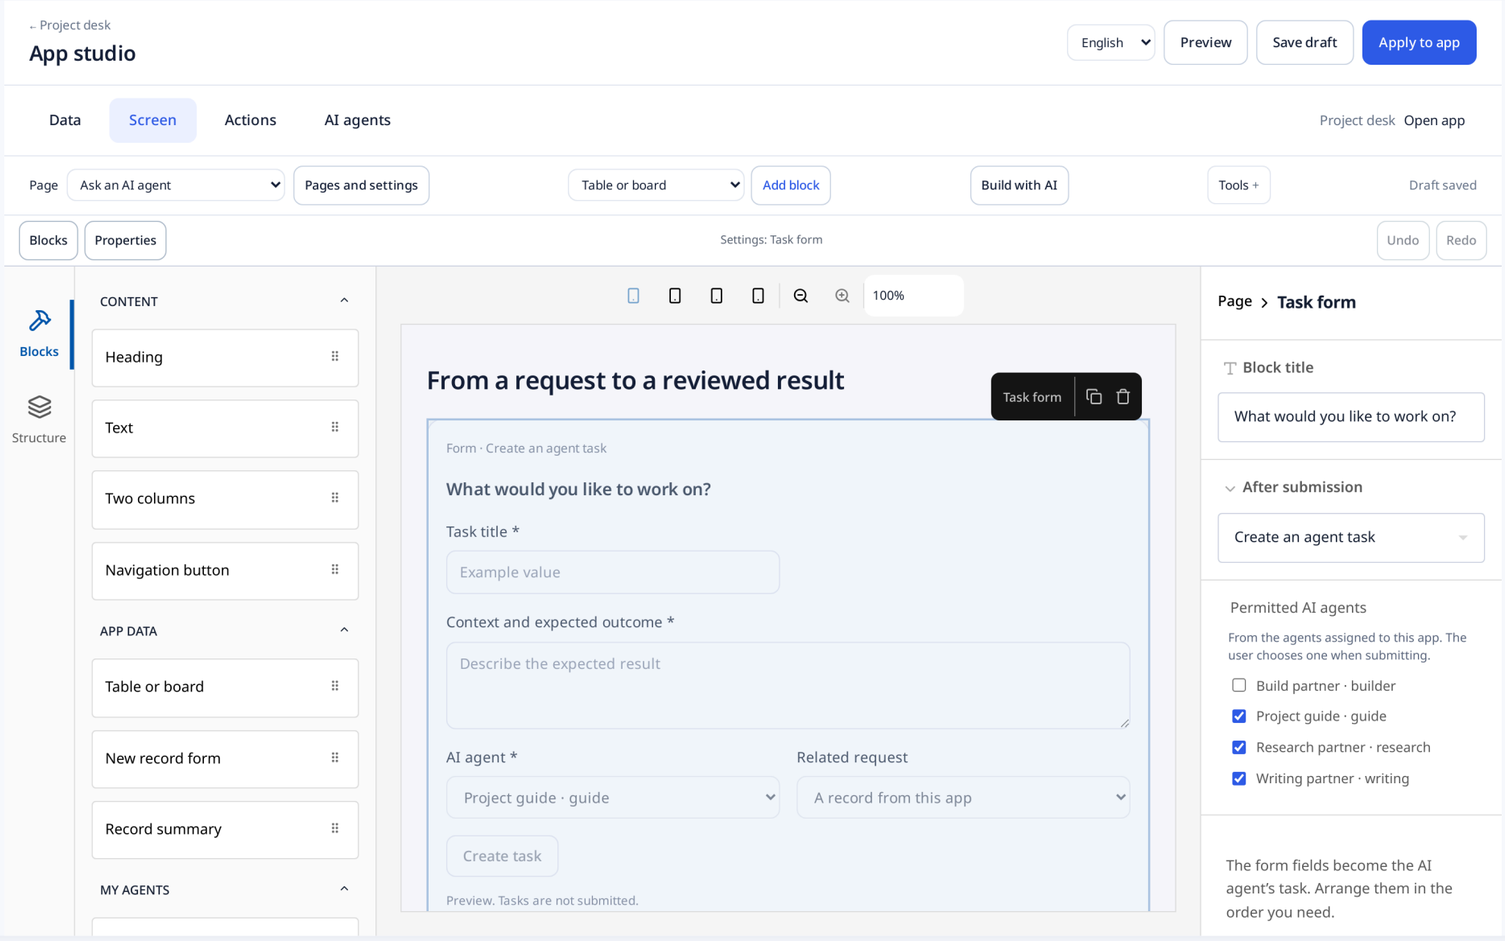

Choose fields, types and stages. Your forms, tables and boards use the same app data.

VISUAL BUILDER

Build the screen around the task.

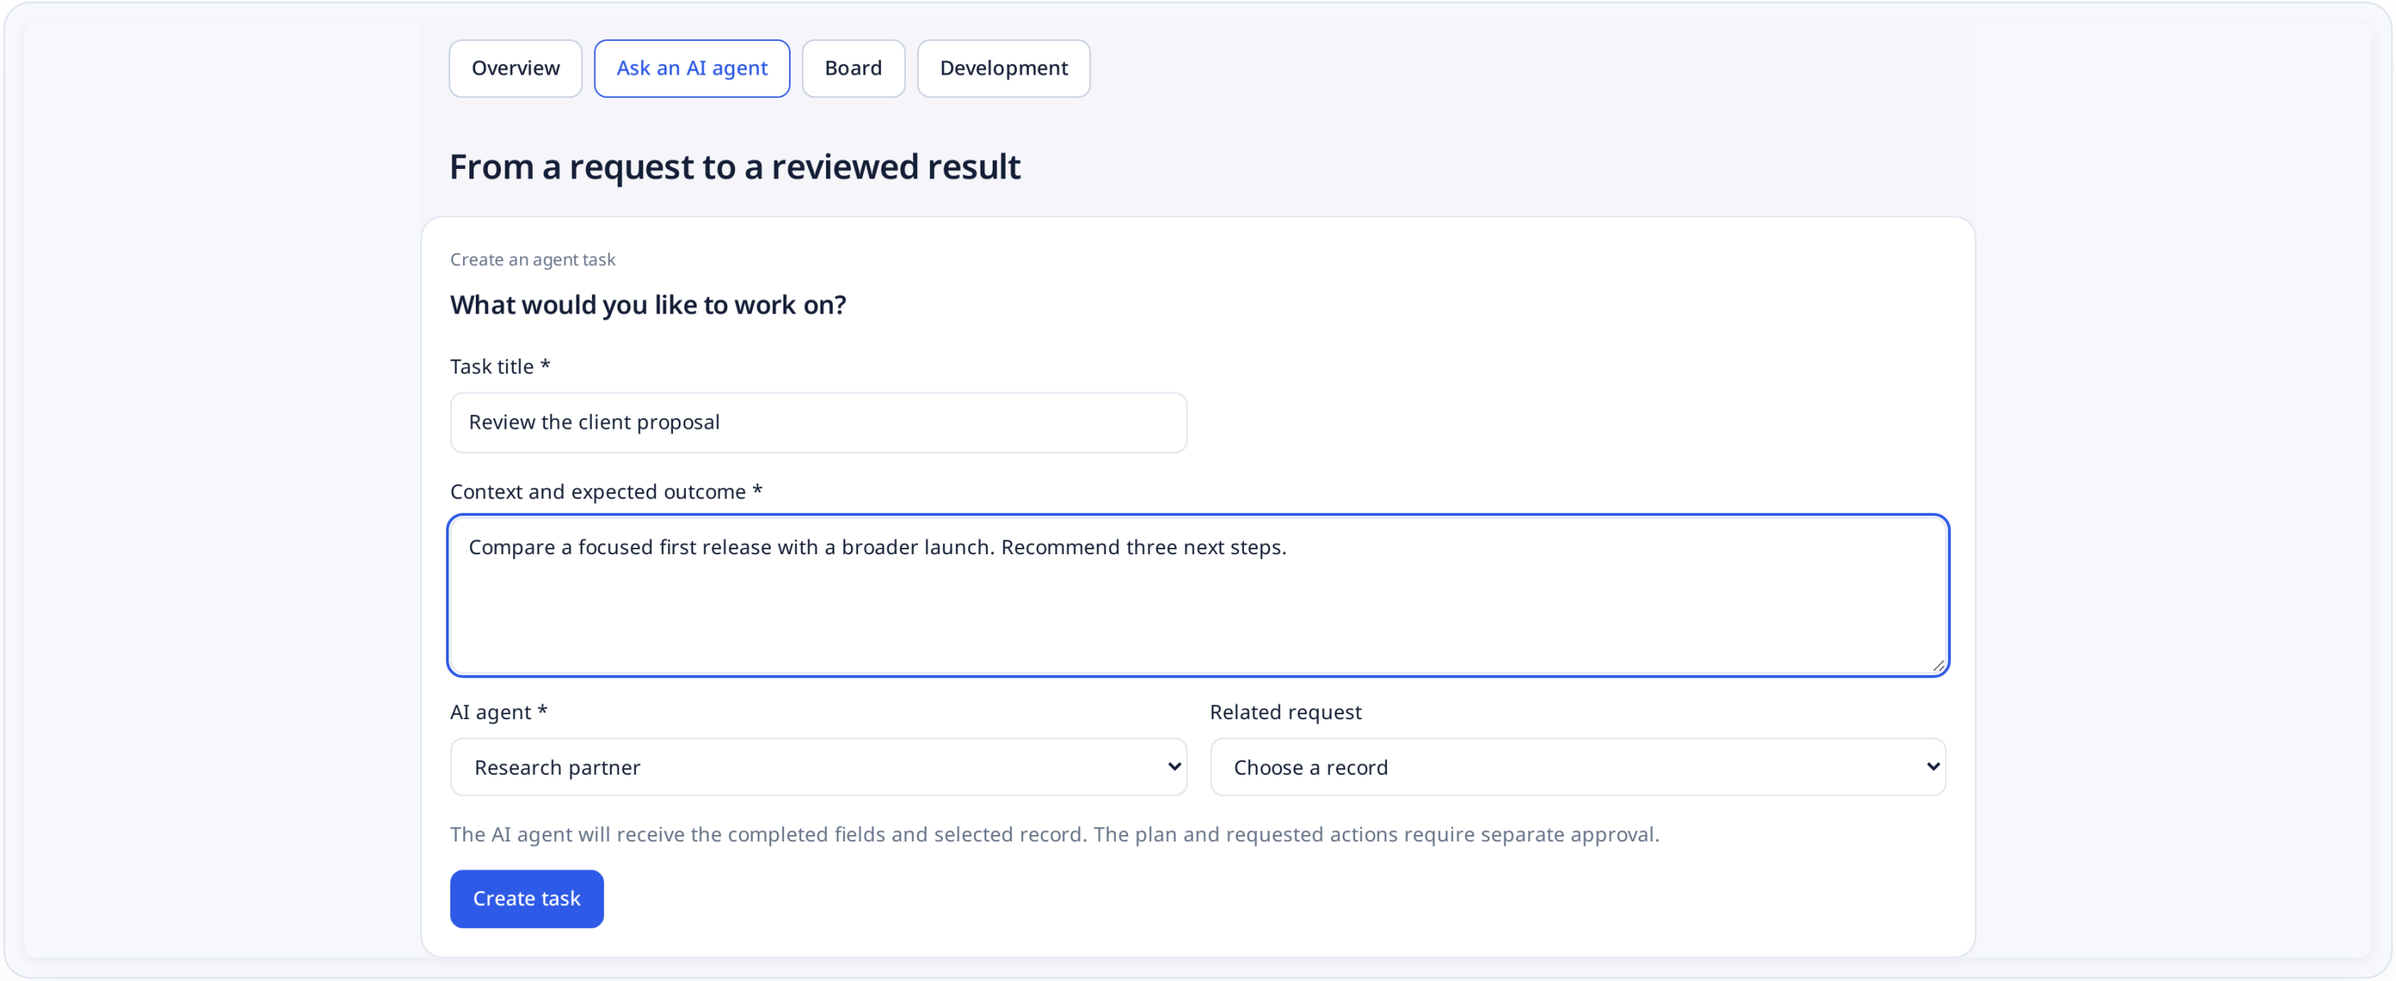

Add blocks, arrange pages and edit properties. Preview the draft before publishing.

YOUR OWN FORMS

Ask for exactly the right input.

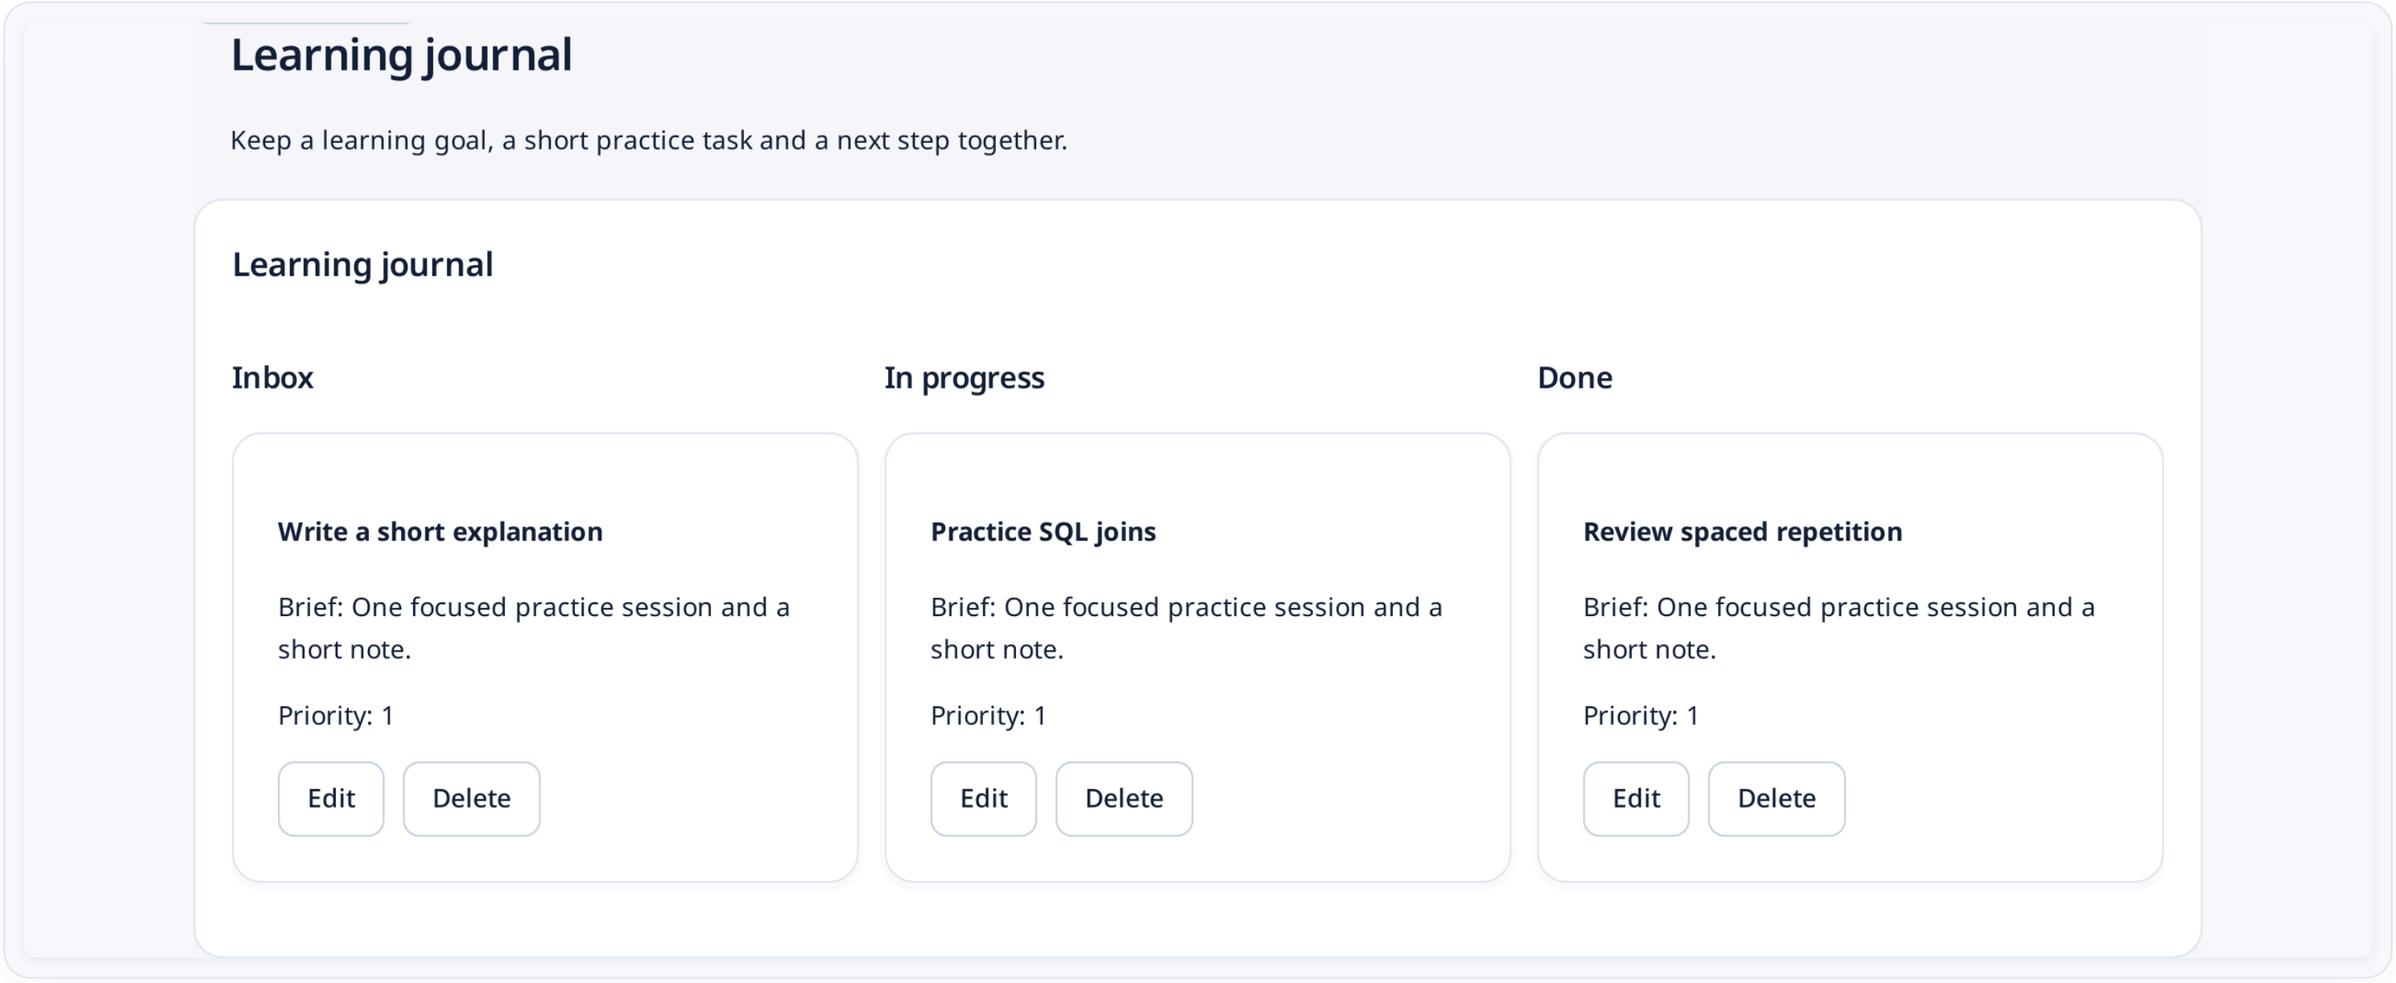

Set labels, required fields, allowed agents and the action behind the button.

EVERYDAY USE

Make room for learning and practice.

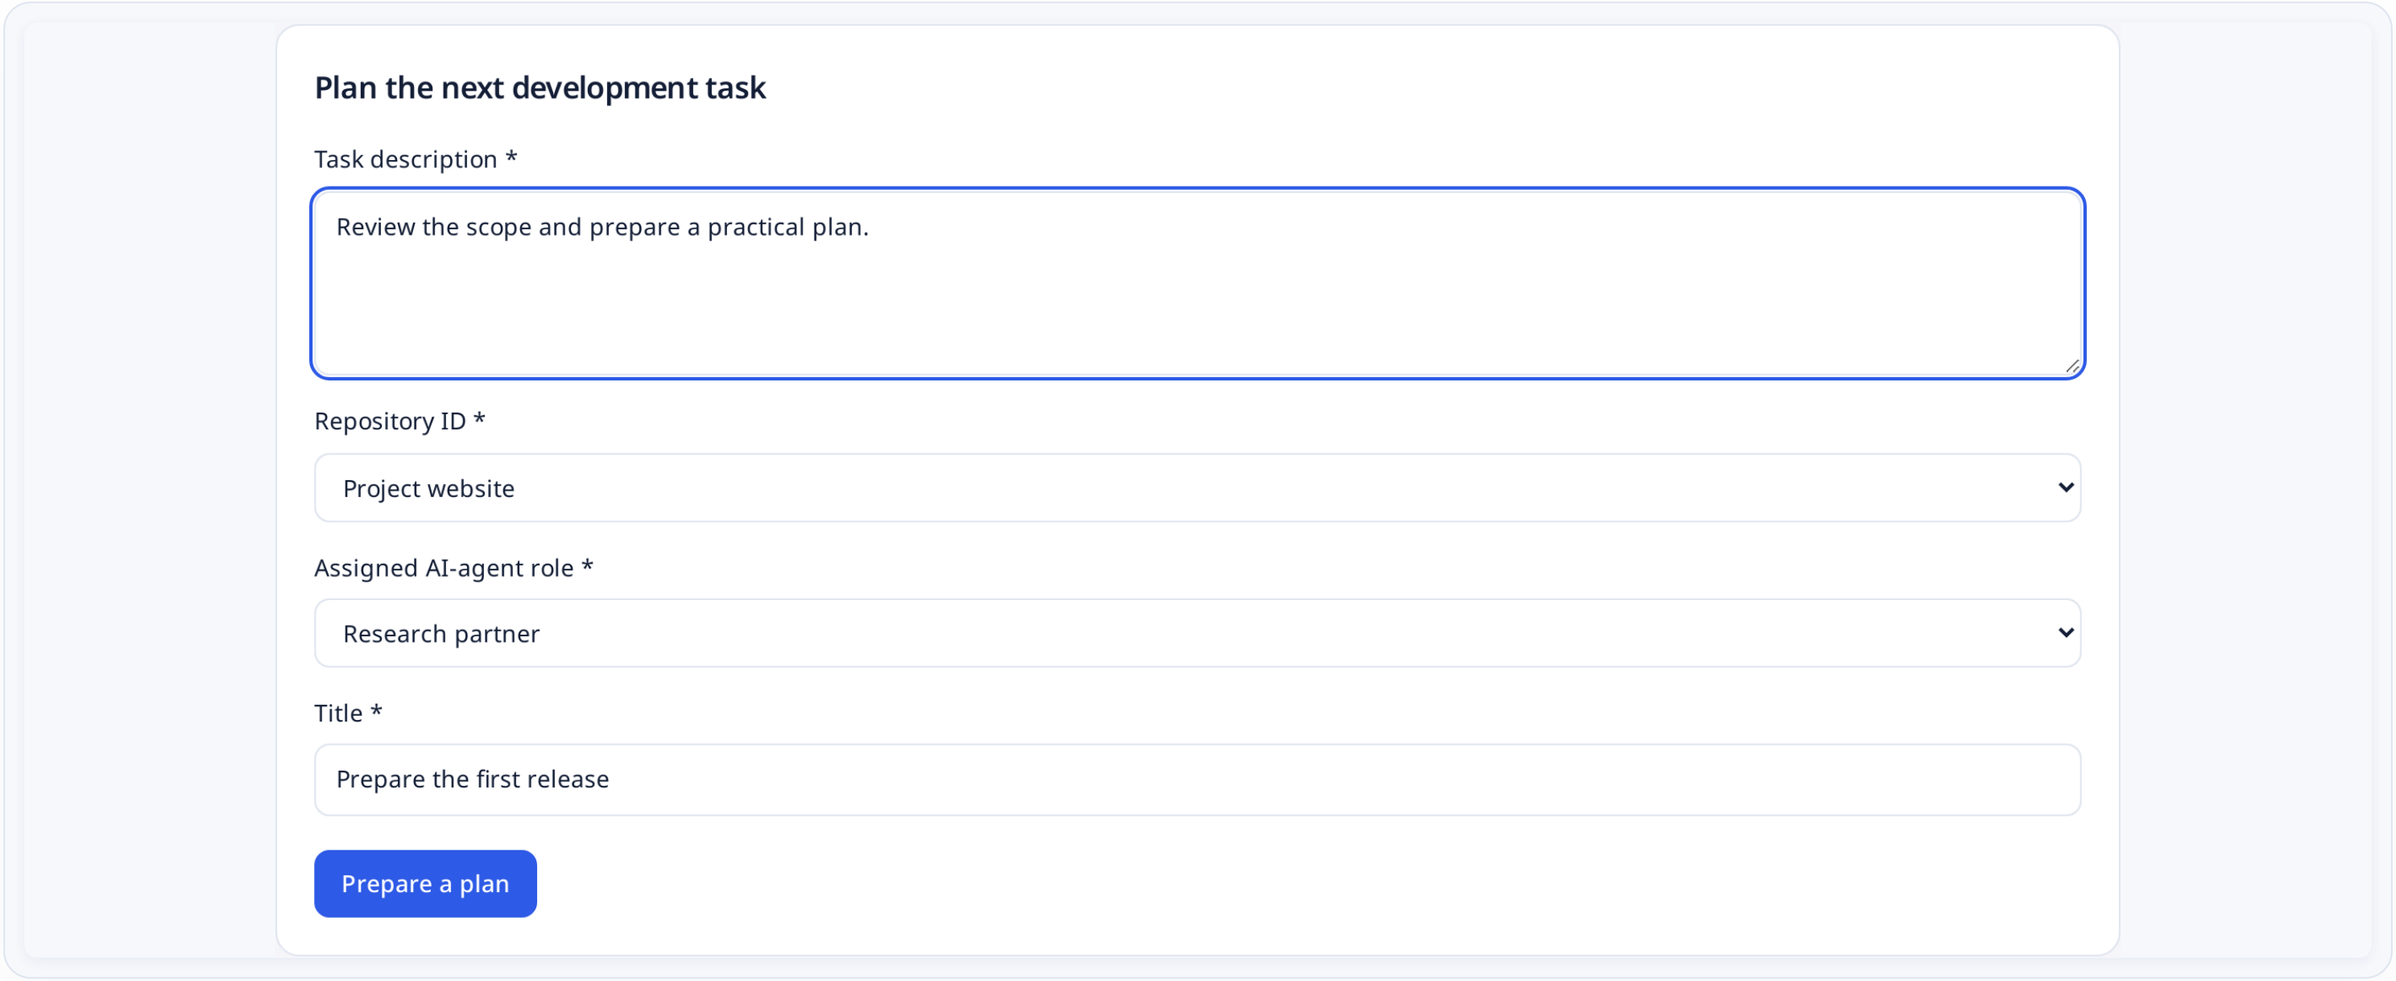

A board turns topics into a visible next step. Use the same building blocks for project work.

INSTALLED CAPABILITIES

Add Git to the app where you need it.

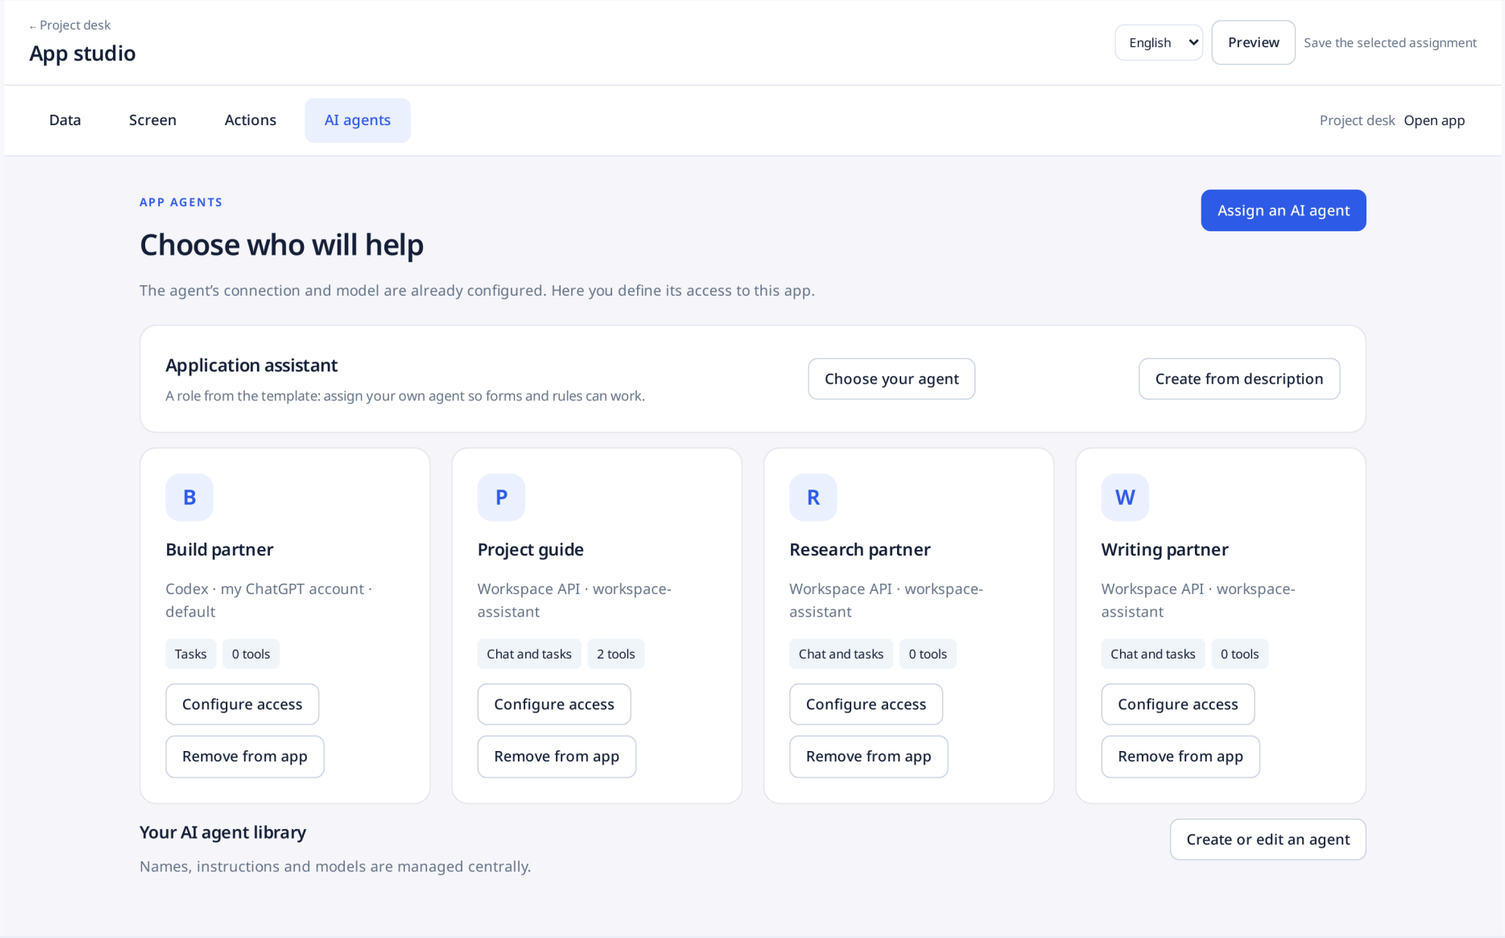

Registered sources and actions become tables and typed forms. Choose an agent from your app.

YOUR AGENTS

Give each agent a useful role.

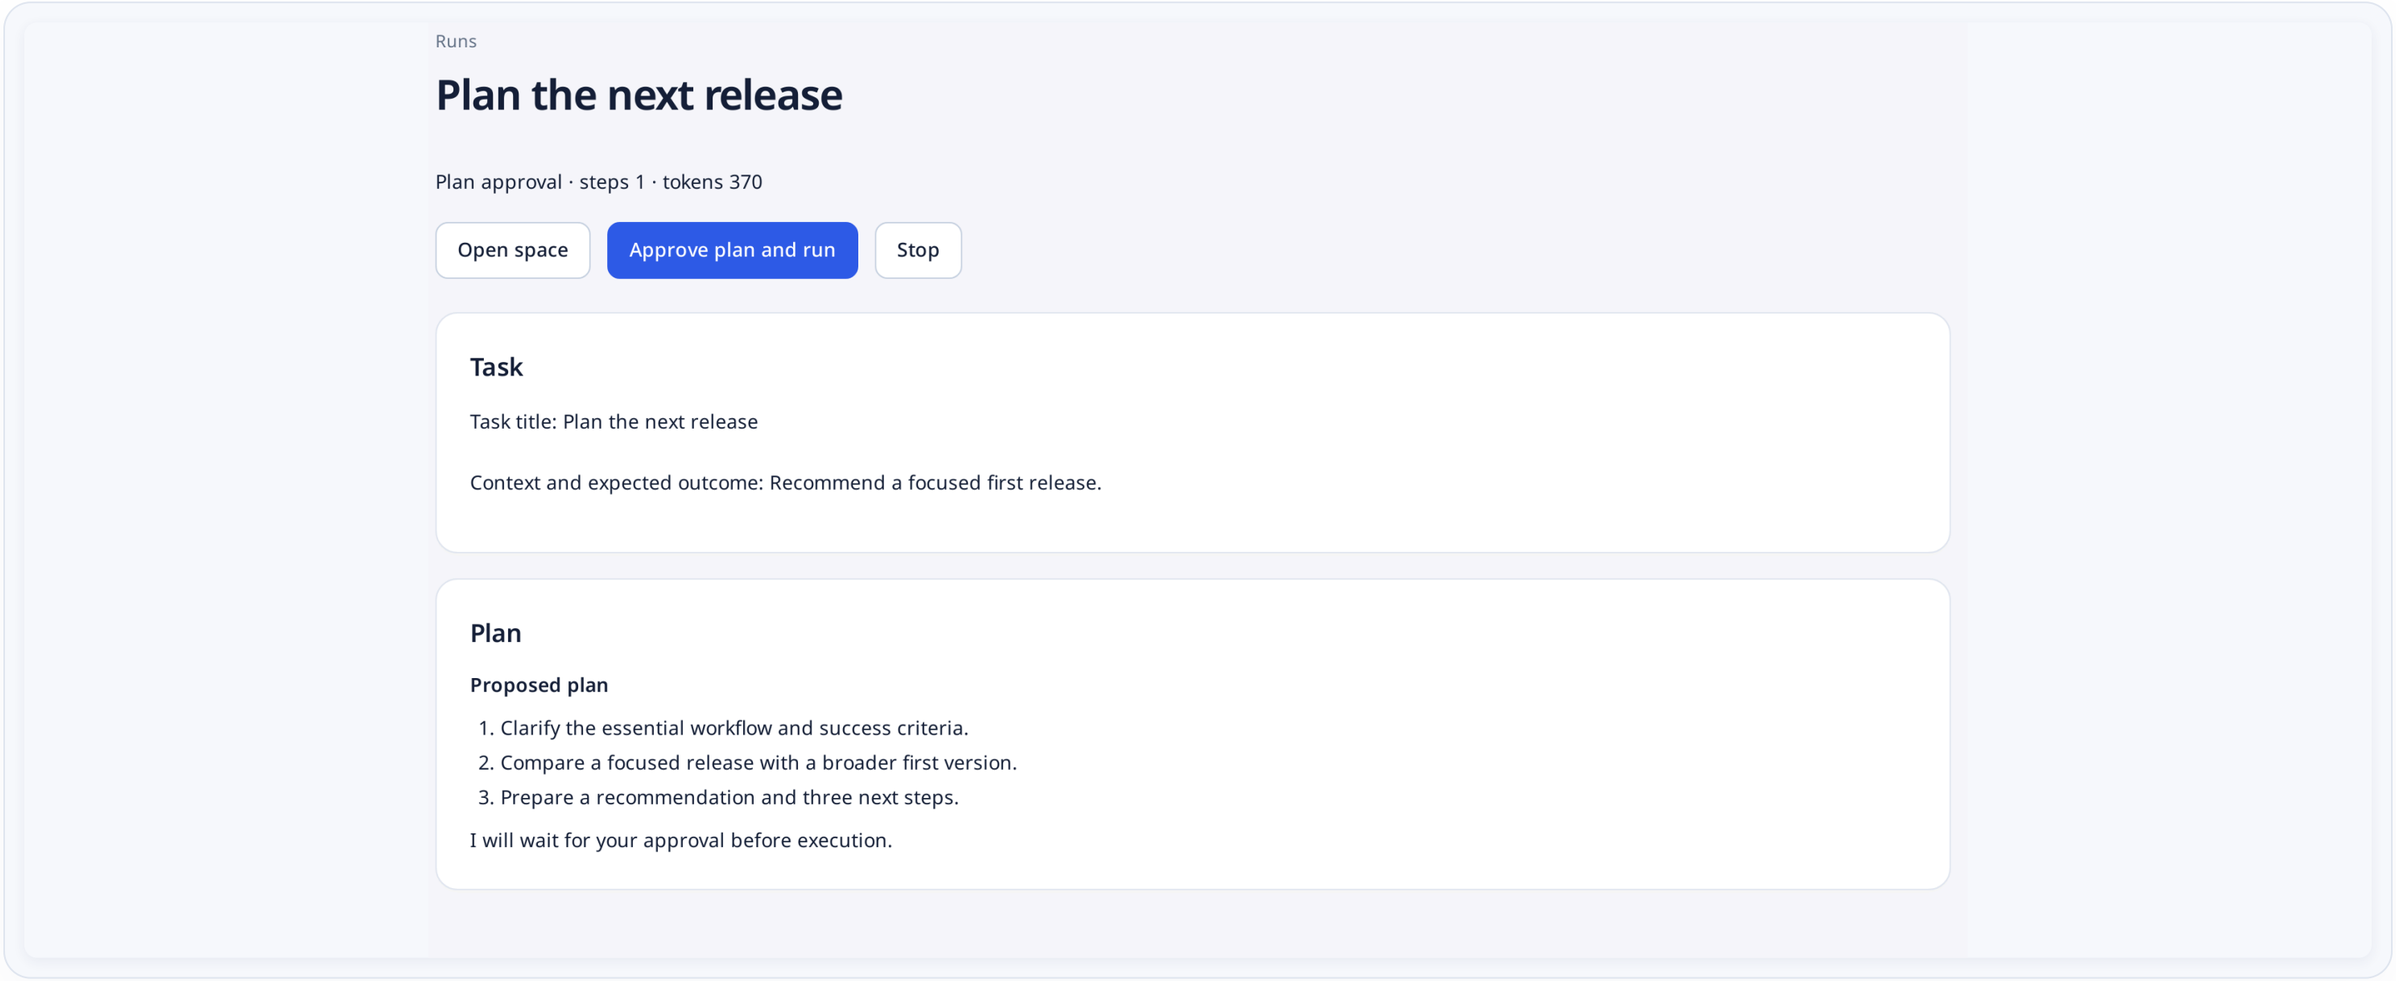

Set instructions, a model and its connection. Assign the agent to the apps where it may work.

HUMAN DECISIONS

Review the plan before execution.

A request becomes a tracked task. Approve the proposed plan when you are ready.

RESULTS & HISTORY

Return to the outcome, not a lost answer.

Keep the task, its progress, approvals and result together. Earlier jobs remain available in History.

Result

Recommendation: start with one complete workflow.

1. Agree on the goal and acceptance criteria.
2. Prepare a request form and a clear task list.
3. Review the outcome with the project team.

Ship the essential journey first, then expand from feedback.

CONVERSATION

Think it through. Then continue.

Persistent conversations keep earlier messages available when the plan changes.

You
I have three hours: client proposal, design review and urgent emails. What comes first?

Agent
Start with 90 minutes for the proposal, then 45 for the design review. Use 30 for urgent email and keep 15 as a buffer.

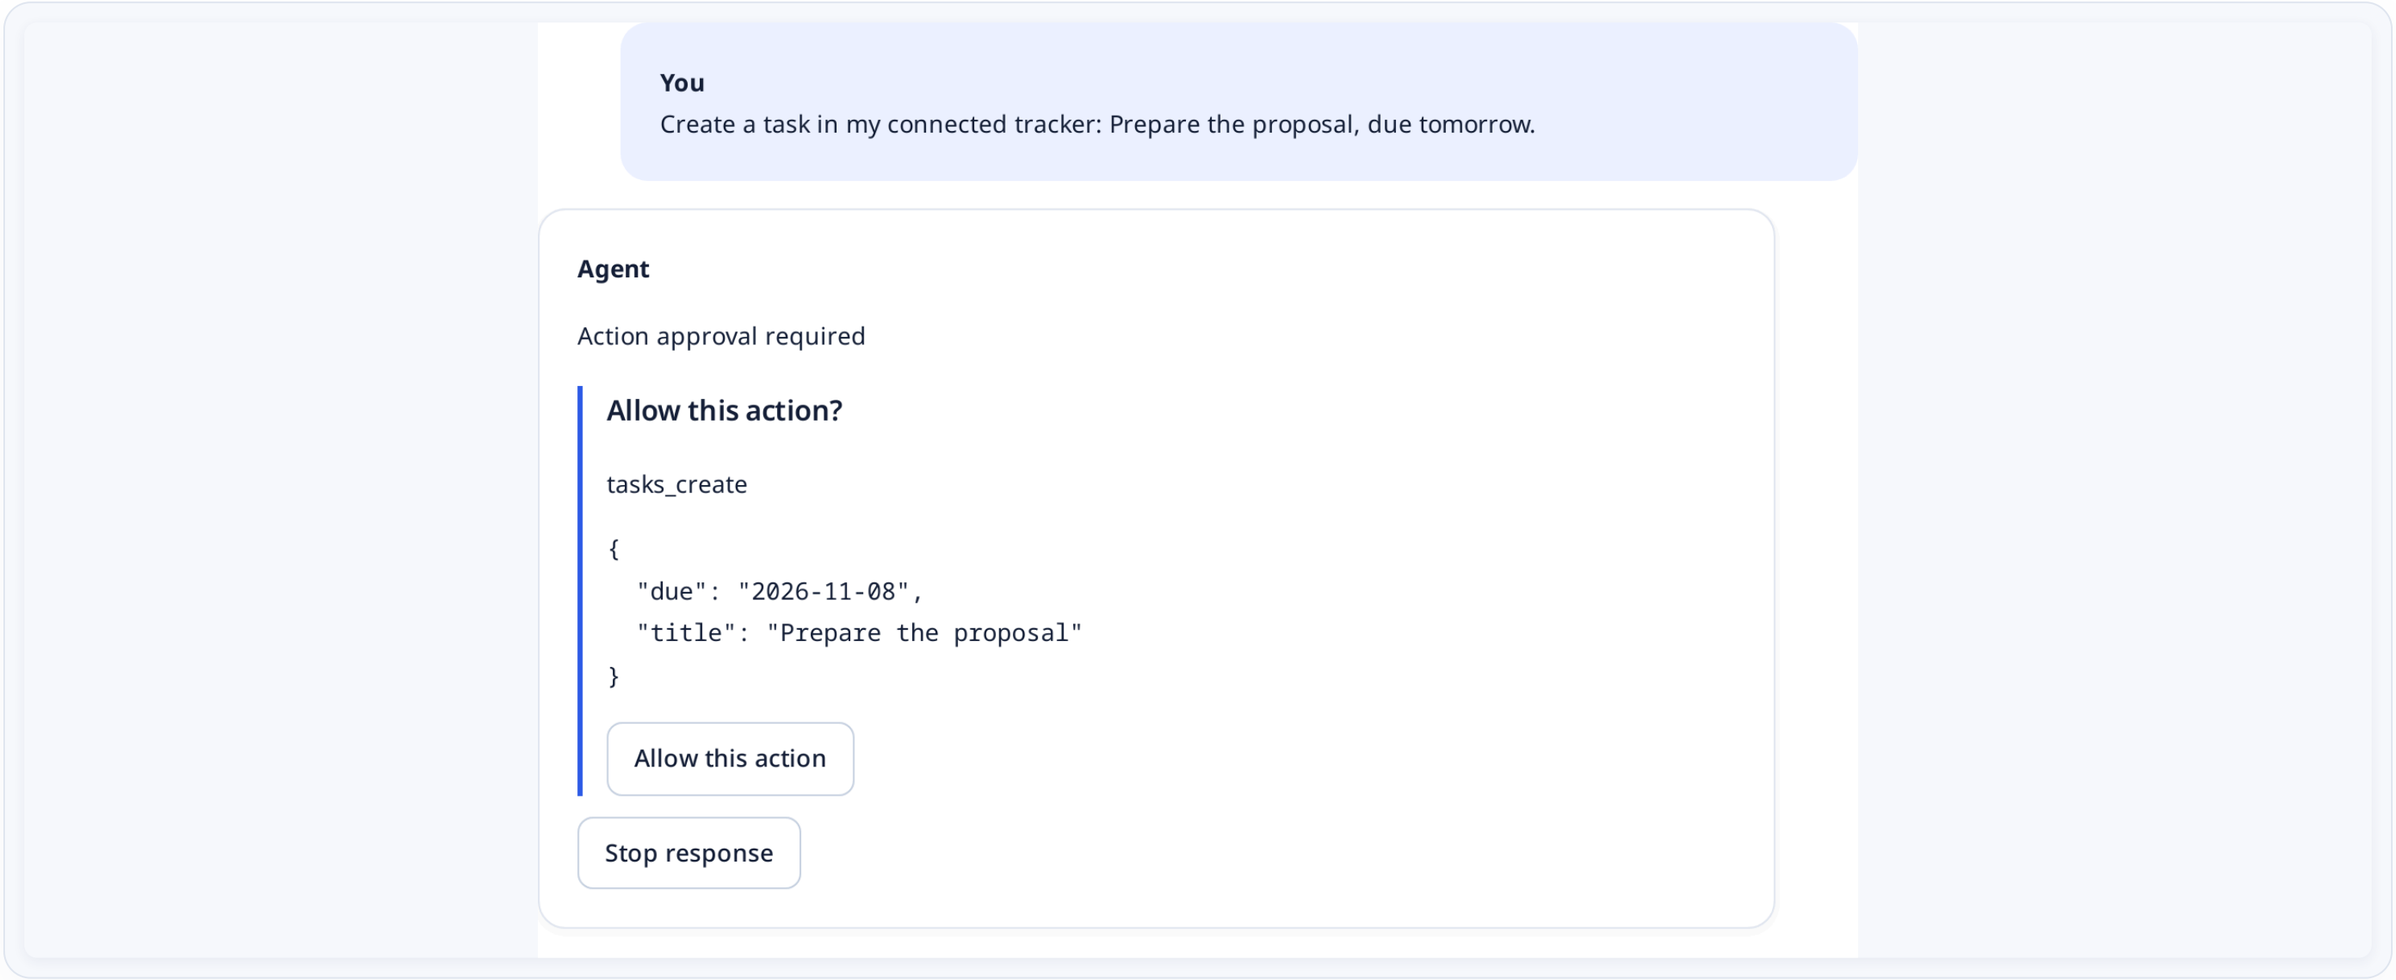

You
The design review moved to tomorrow. Keep 30 minutes for focused work.

Agent
Keep the proposal first. Use the freed time for 30 minutes of focused work and a larger buffer.

TOOLS WITH APPROVAL

A tool call is a visible decision.

The agent proposes an action using an allowed tool. You can approve or reject it.

YOUR CONNECTED CALENDAR

Ask about meetings through MCP.

Connect your calendar’s MCP tool, allow event search and ask about tomorrow.

You

What meetings do I have tomorrow in my connected calendar?

Agent

Your connected calendar has two meetings tomorrow:

- **10:00 — Project planning**
- **15:00 — Design review**

There is a useful window between them for preparing the proposal. No calendar events were changed.

FROM CONVERSATION TO ACTION

Create a follow-up in your tracker.

With your connected MCP tool and approval, the assistant can create a task and show confirmation.

You

Create a task in my connected tracker: Prepare the proposal, due tomorrow.

Agent

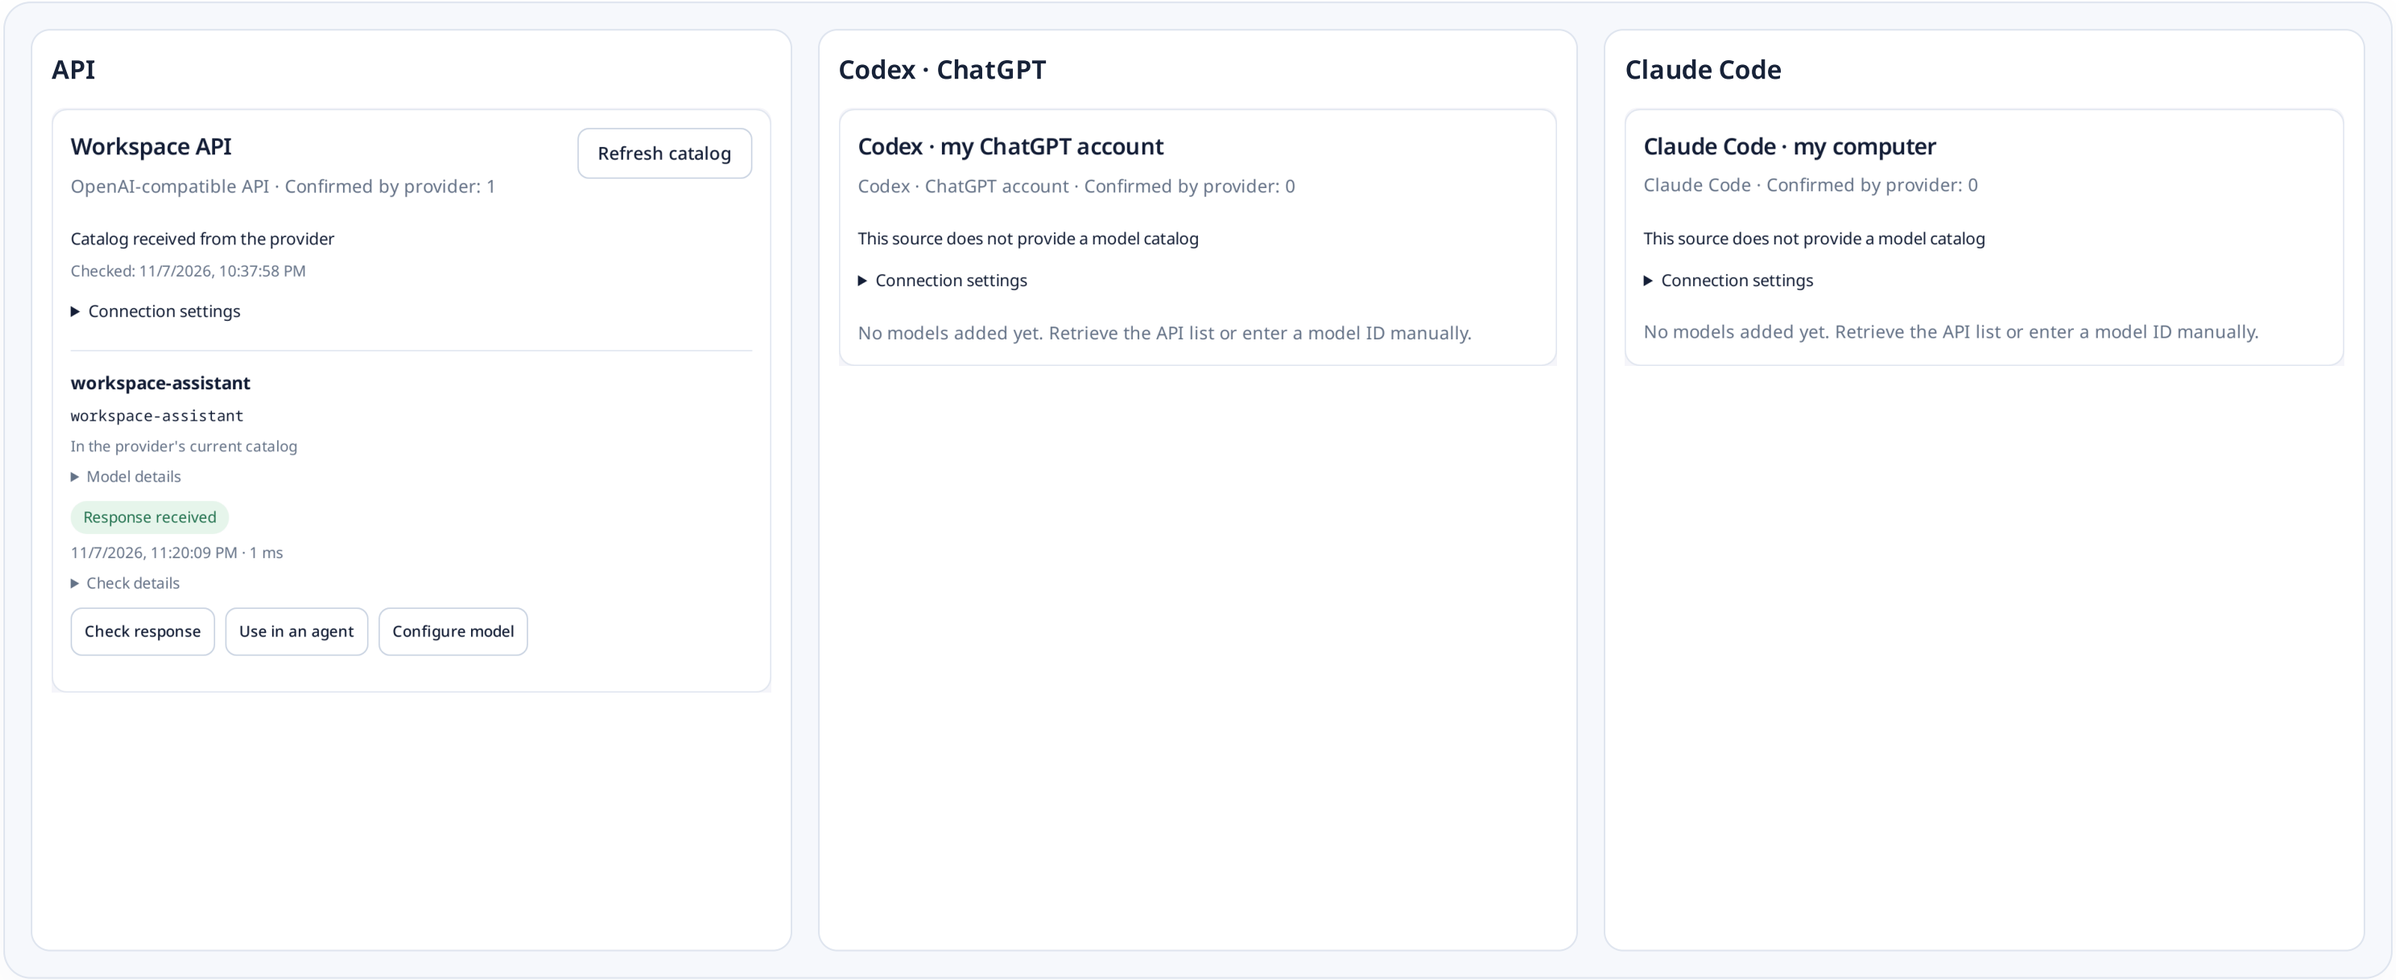

Created **TASK-104 — Prepare the proposal** in your connected tracker.

Due: **November 8**. The tracker confirmed creation after your approval.

CHOOSE HOW AI RUNS

Your API. Your personal task connector.

See model sources and response checks. Use an API for chat and tasks; Codex with your ChatGPT account or Claude Code through your task connector.

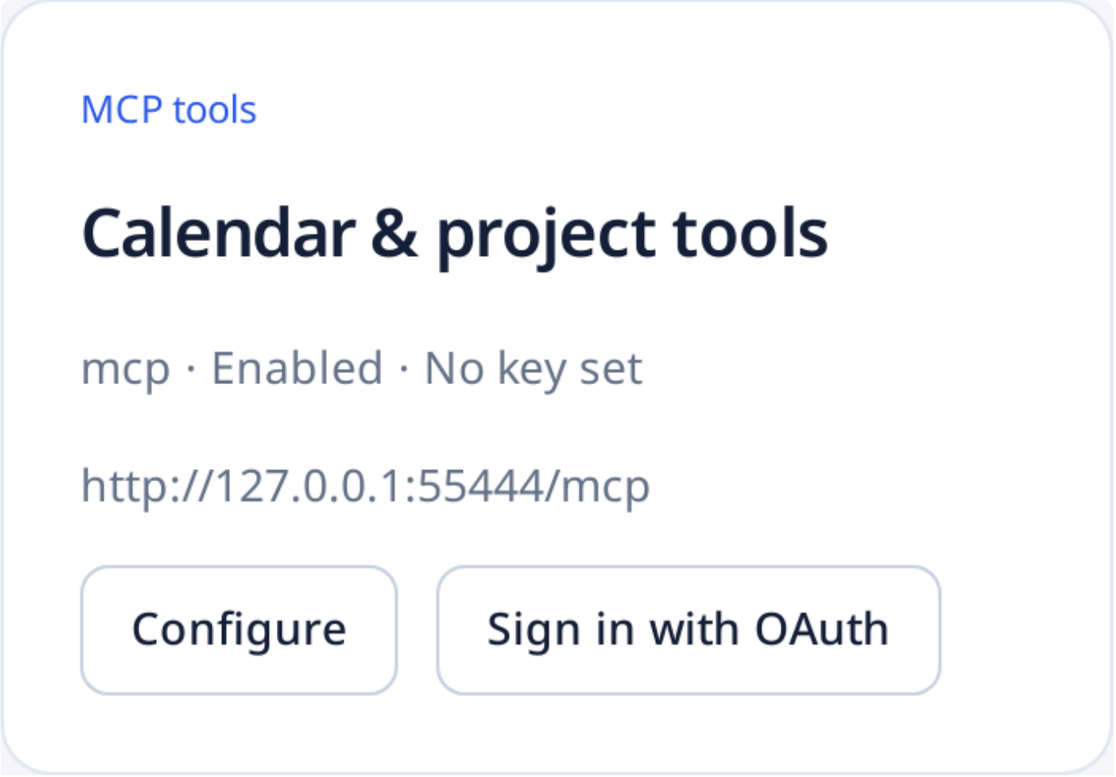

REMOTE & LOCAL MCP

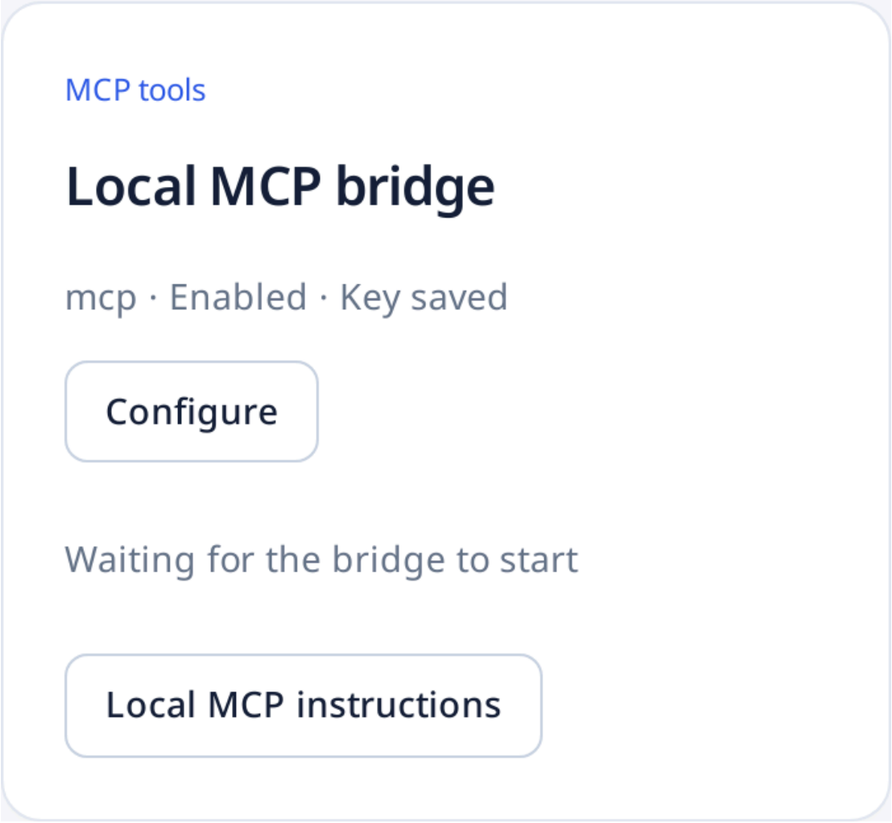

Bring your own tools.

Connect a remote MCP service, or run the local bridge on your machine. Then allow selected tools in an app.

Remote MCP

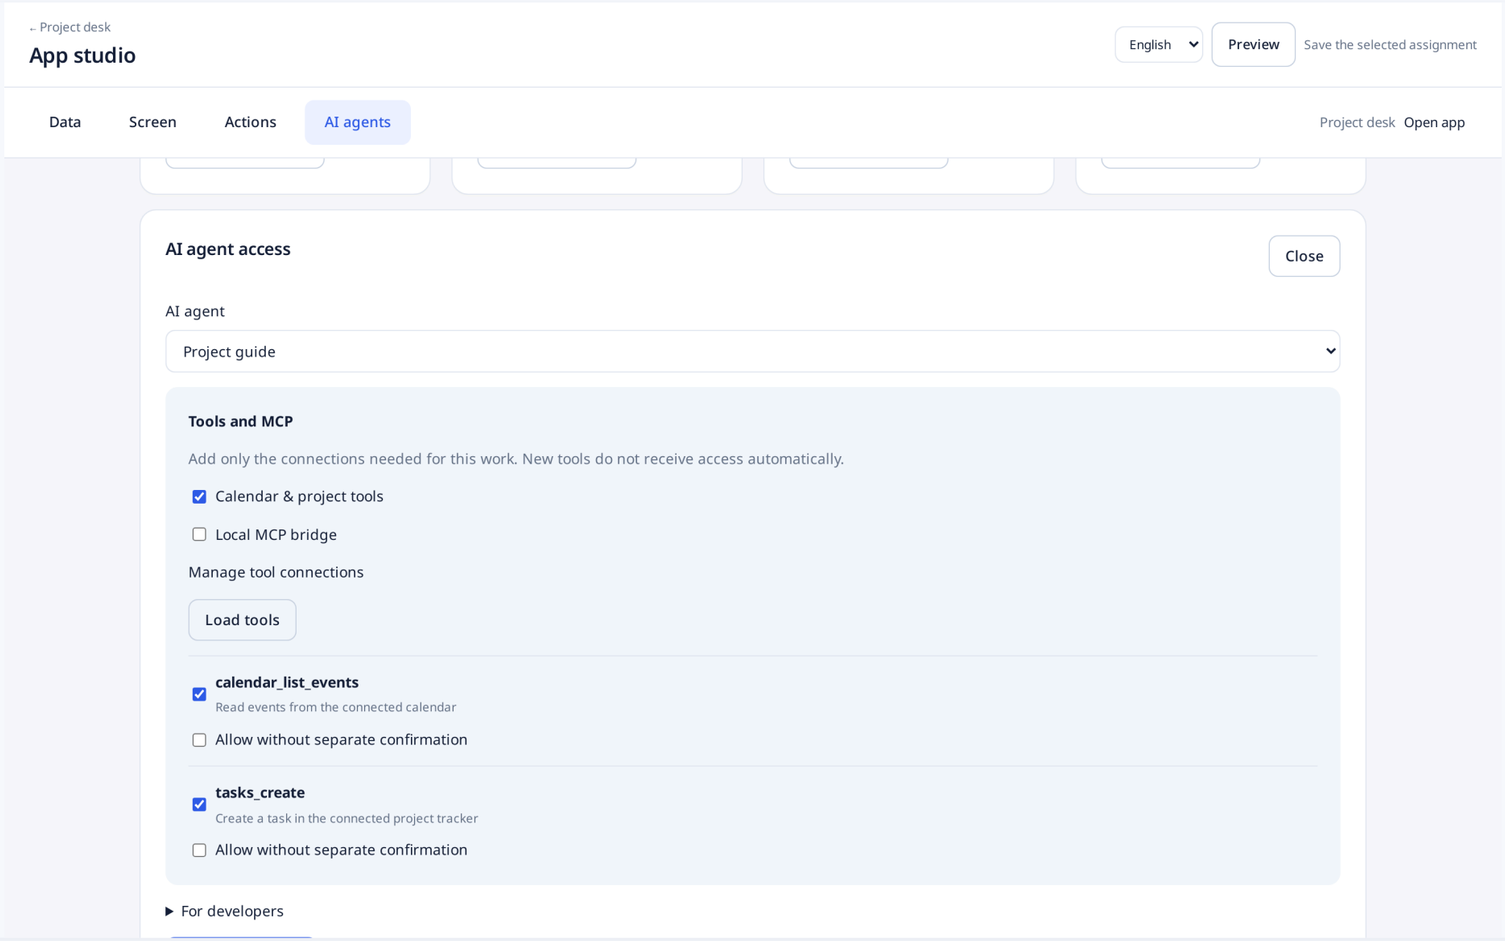

Local MCP

SCOPED ACCESS

Permission is specific to the work.

Choose an app, an agent, a connection and exact tools. New tools do not receive access automatically.

PROCESSES

Turn a repeated task into a workflow.

Combine an agent step with a record update. Follow approvals, step results and the final state.

Review a request and mark it done

Completed · 11/7/2026

1. AI agent task · Done

Open task and approvals

Recommendation: start with one complete workflow.

1. Agree on the goal and acceptance criteria.
2. Prepare a request form and a clear task list.
3. Review the outcome with the project team.

Ship the essential journey first, then expand from feedback.

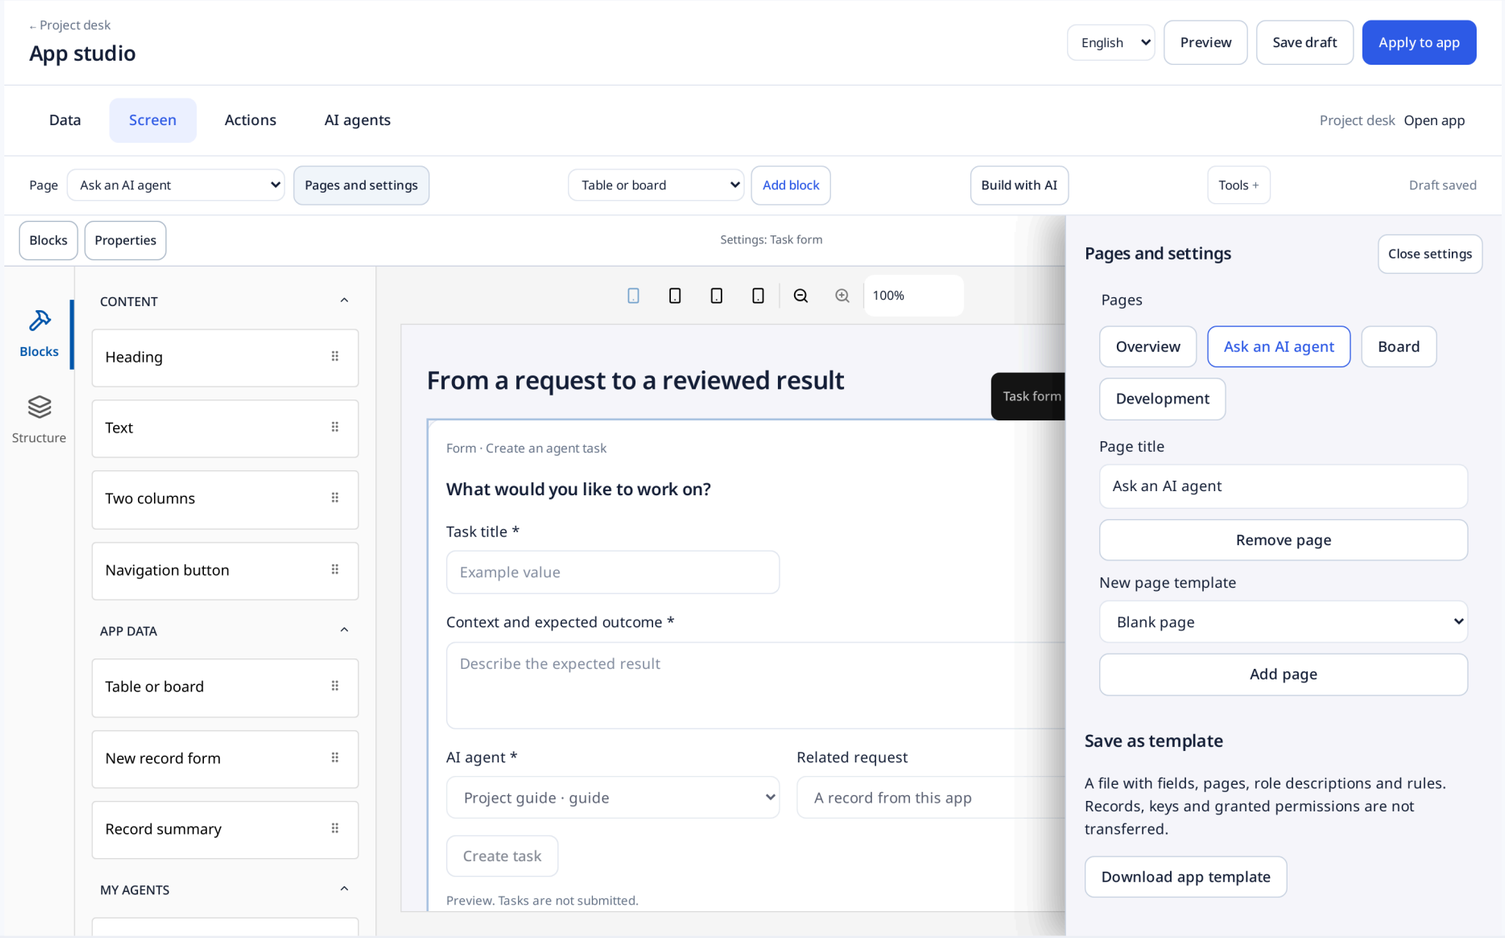

2. Stage change · Done

Stage: done

REUSABLE STRUCTURE

Save an app as a blueprint.

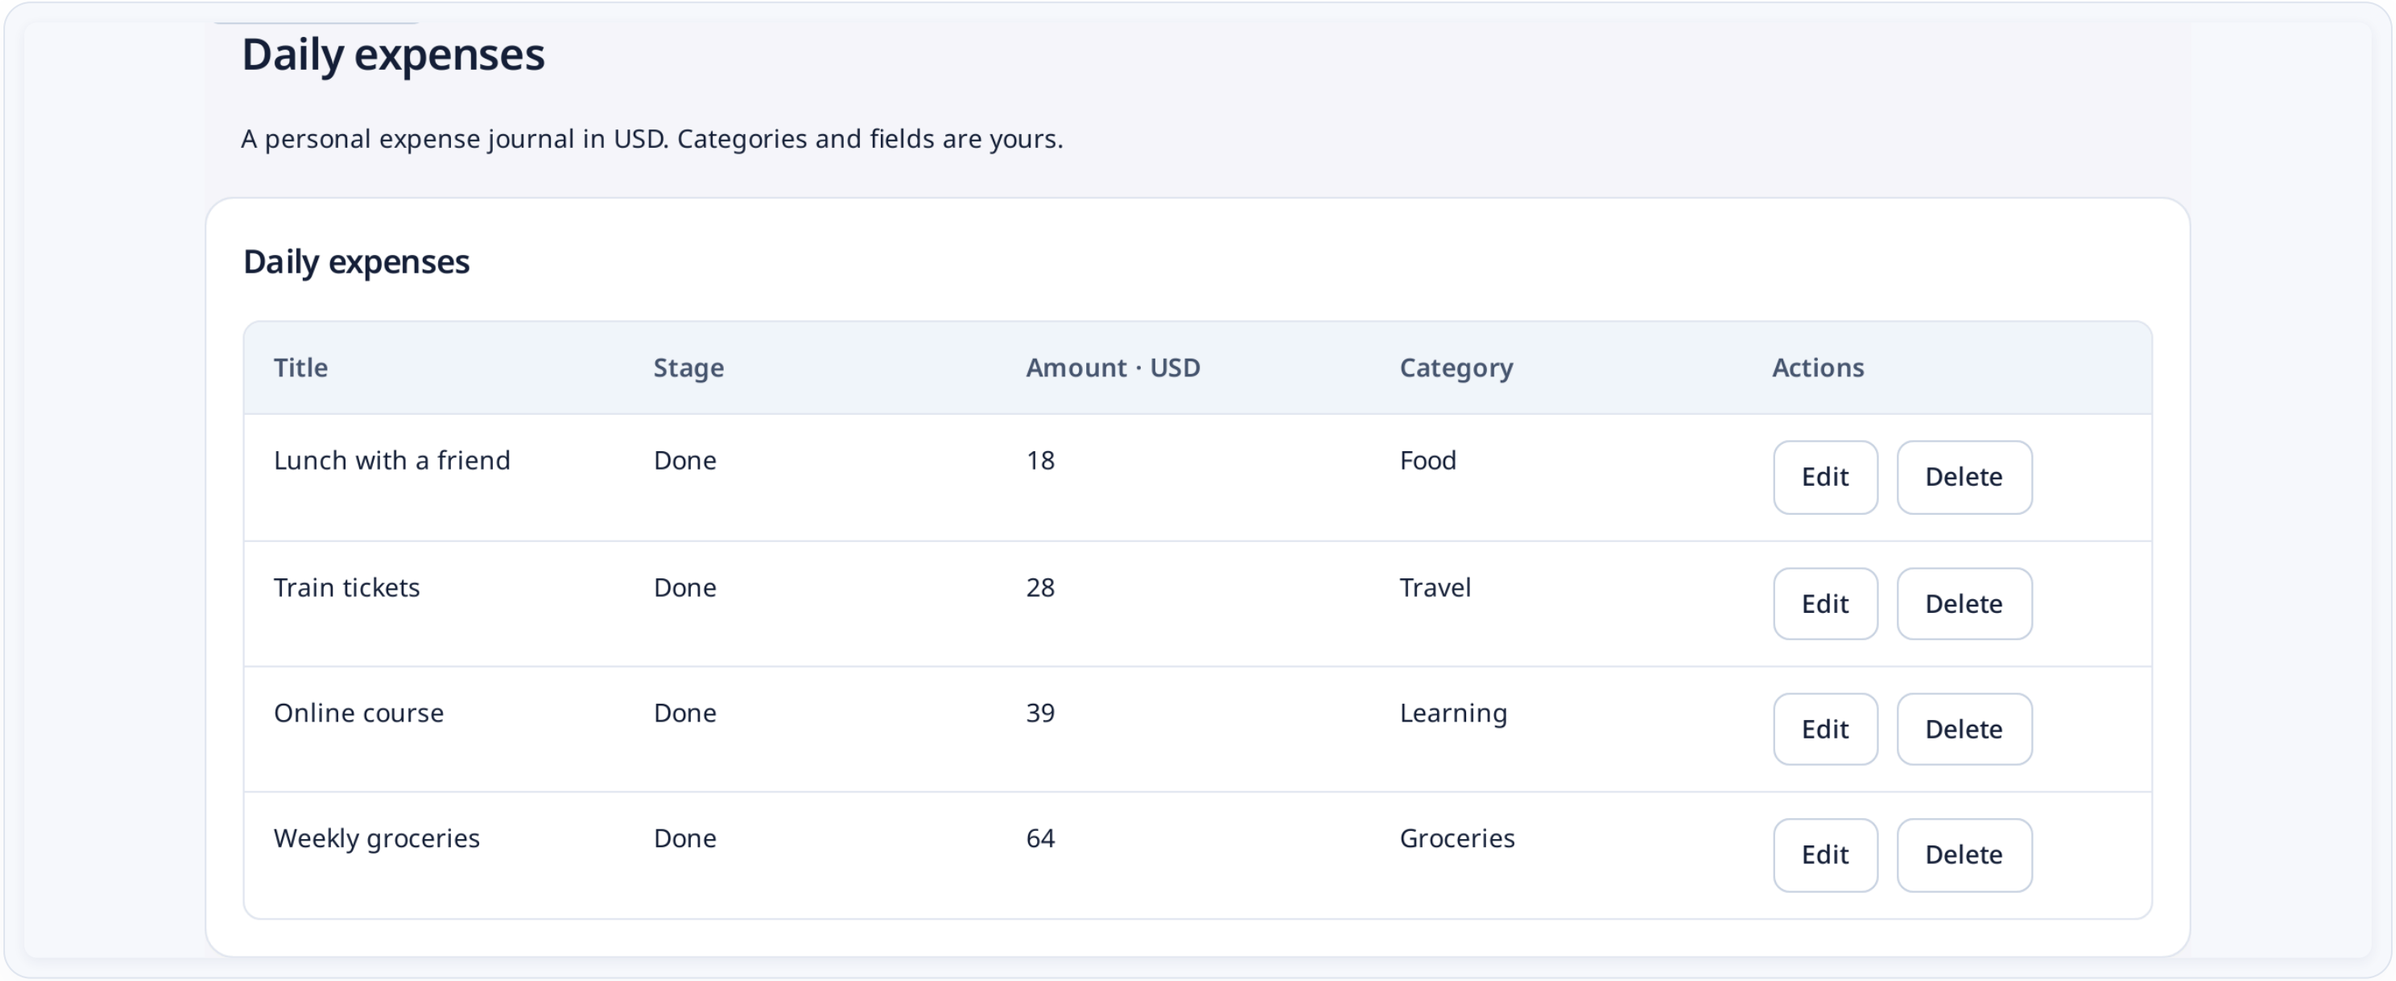

Carry fields, pages, role descriptions and rules. Connect accounts and grant access separately after import.

PERSONAL USE

A simple expense journal in USD.

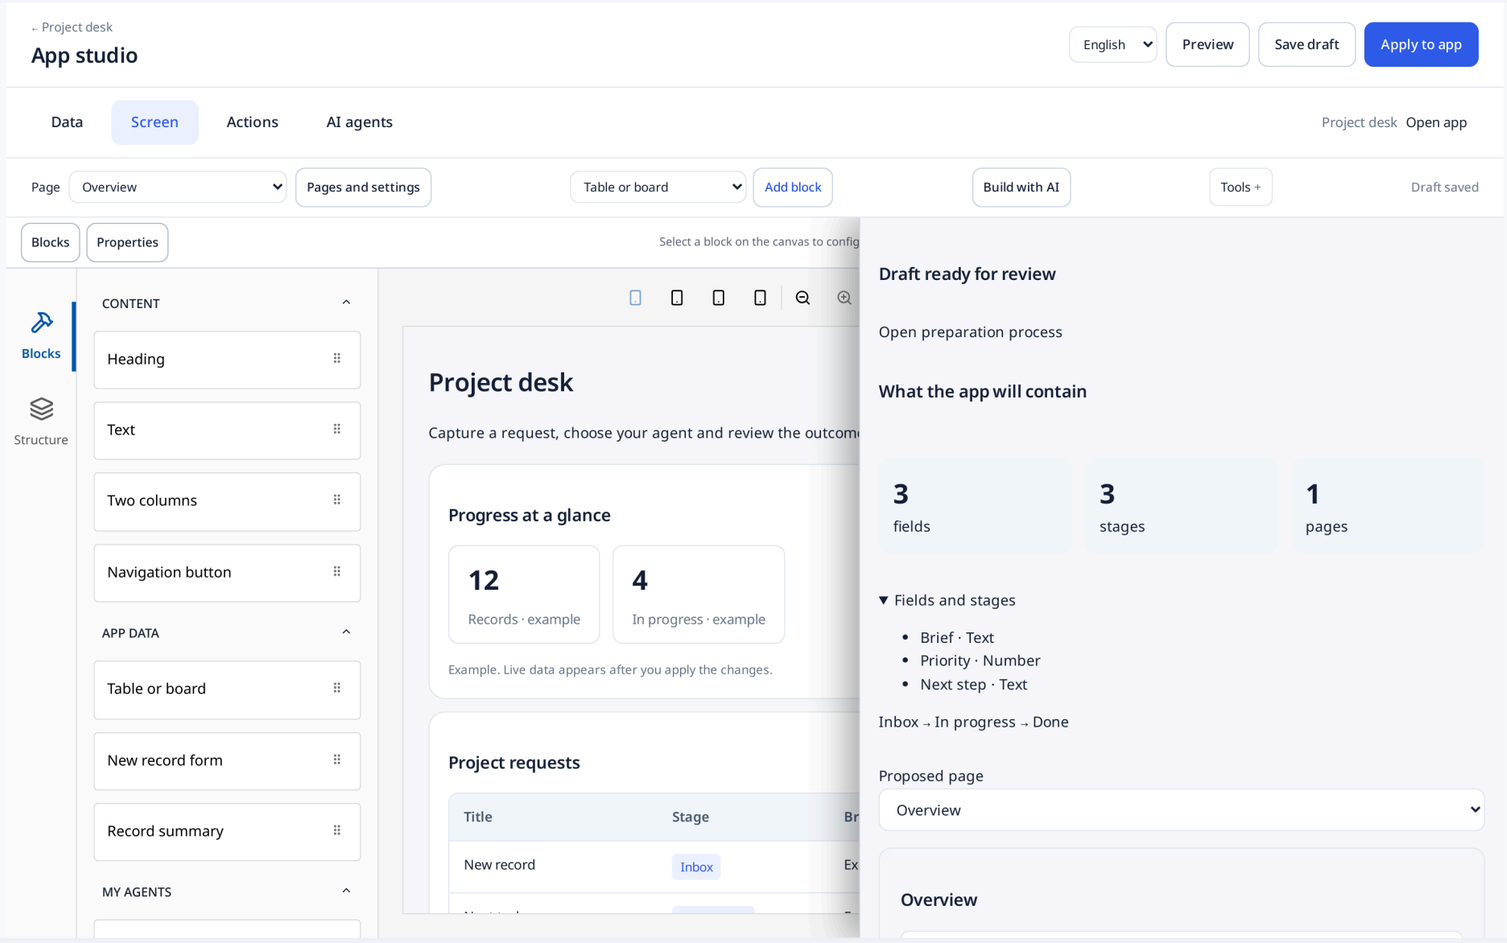

Choose your own categories and amount fields. Track everyday spending in an app you control.

BUILD WITH AI

Review a proposal before applying it.

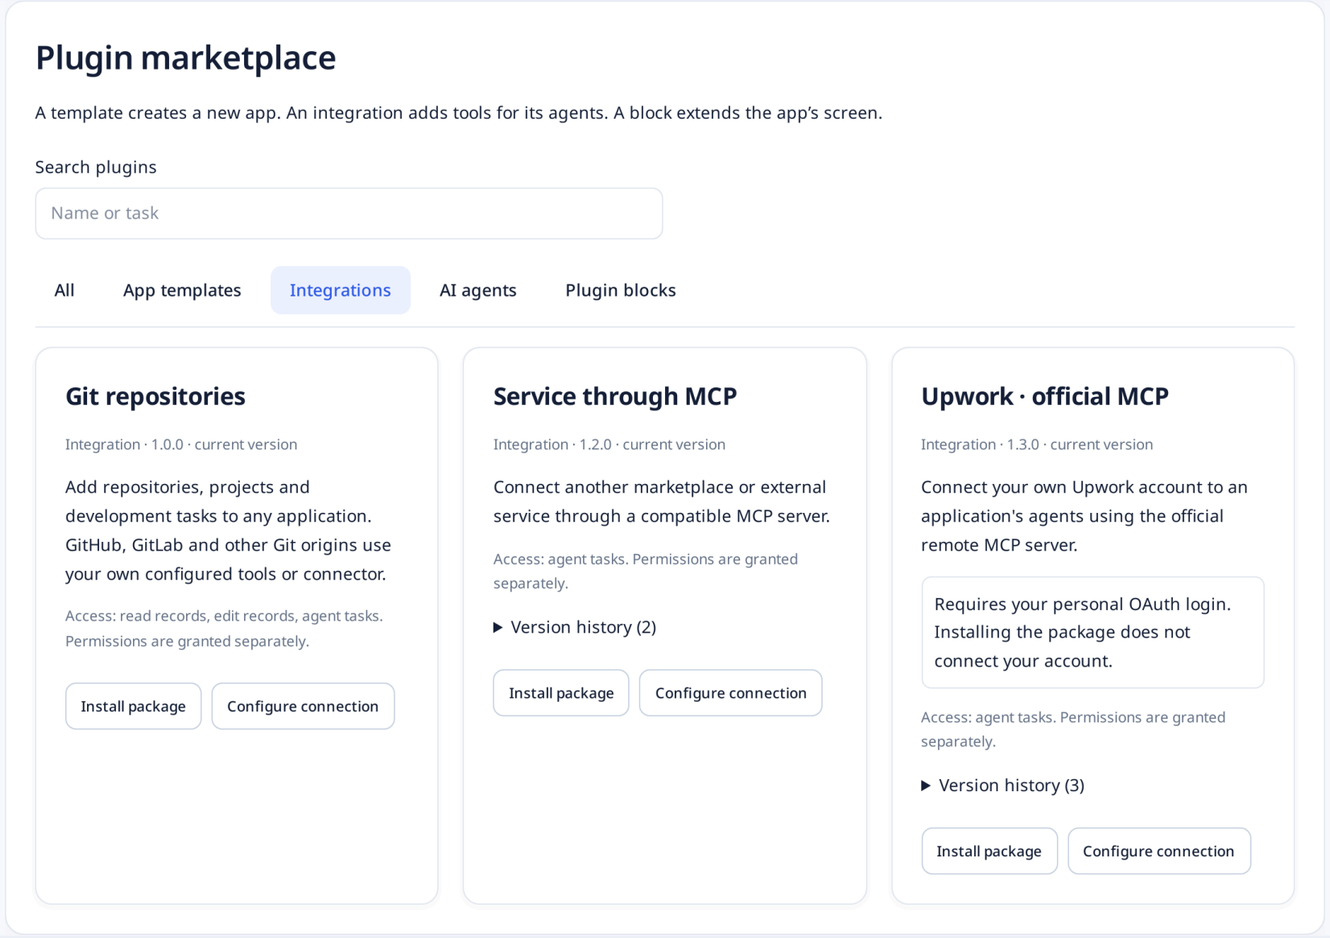

Describe the app you need. Inspect the generated structure, apply it to the draft and publish after review.

CATALOG · SDK · LANGUAGES

Extend the workspace without hardwiring it.

Templates, integrations and widgets. Developer packages declare capabilities, typed schemas and optional language dictionaries. English is the default.

Teyvi

MAKE IT YOURS

Start with one task. Build the space around it.

Your pages, data, agents and decisions — available wherever you open Teyvi.
